Interior Doors

# COMPANY PROFILE

# HISTORY

Porta Candia is an interior door brand that is a part of the family business in the woodworking industry. Our roots go back to the 1950s. In those years, furniture made by hand required complete craftsmanship. Over the years, lots of things have changed in the industry. However, our love and passion for woodworking never changed. From the beginning of the 2000s, wooden interior doors became the main business for the family.

*In the picture on the left, our grandfather (Muzaffer Isınlık) and his brother (Sami Isınlık) were making a piece of furniture by hand.*

# VALUES

- **High-Quality:** We guarantee that all materials, craftsmanship, and services meet our high standards of quality.
- **Sustainability:** We assure environmental sustainability in every aspect of the business.
- **Integrity:** We build trust through responsible actions and honest relationships.
- **Customer-Focused:** Customers are our partners. We succeed when, and only when, our customers succeed.

01 HIGH-  
QUALITY

02 SUSTAINABILITY

03 INTEGRITY

04 CUSTOMER  
FOCUSED

# PRODUCTION

- 1. Material Selection:** To produce high-quality doors first step is to choose the best materials. We work with a broad network of trustworthy partners and world-class suppliers.
- 2. Craftsmanship:** If you are working with wood, excellent craftsmanship should be essential to ensure high quality. Even though technology brought mechanization to factories still manual craftsmanship is necessary for some parts of production.

# PRODUCTION

**3. Technology:** Technology is another basic of high quality. The quality of the machines and expertise while using them is directly related to product quality. In our factory, we use new technologies. Our plant layout allows for both mass production and custom production at the same time. Our machines (especially CNC Machines) enable us to produce bespoke designs.

**4. Product Finishing and Quality Control:** Product finishings not only make the product look good, but also plays a significant role in ensuring that the product performs as they are intended to perform and lasts longer.
